Remembering Bob Lee

Bob Lee

As a Google employee, Bob Lee led the core library development for Android, created the Jolt award-winning Guice framework, served as Spec Lead for **JSR 330**, Dependency Injection for Java, represented Google on the JCP SE/EE Executive Committee, and contributed significantly to several Java 7 language changes. In a little over four months, JSR 330 whipped through all the stages to achieve final release October 2009, making it the most expeditiously completed spec in the history of the JCP program. JSR 330 has been a welcome contribution to the industry because it specifies a means for obtaining objects in such a way as to maximize reusability, testability, and maintainability compared to traditional approaches such as constructors, factories, and service locators. The speed of JSR 330's adoption has rivaled that of its development. Spring and Guice implement JSR 330, and JSR 299 extends it. Bob Lee (<http://crazybob.org/>) has since migrated to Square, where he currently leads engineering. He continues participating in the JCP community as an individual member.
